EDUCATION

Southeastern Louisiana University, Hammond, LA

Expected August 2026

Bachelor of Science in Computer Science • Concentration: Business Administration

GPA: 3.22

Relevant Coursework: Algorithm Design & Implementation I & II, Data Structures, Software Engineering, Database Systems, Operating Systems, Enterprise Systems & Design Patterns, Introduction to Data Science

PROJECTS

Fieldflow | [FieldFlowTech](#)

January 2026 – May 2026

- Sole frontend developer on a 5-person cross-functional team building an offline-first Progressive Web App named Fieldflow, using Next.js 14, React 18, TypeScript, and Tailwind CSS with shadcn/ui components.
- Engineered offline-first architecture using WebAssembly SQLite (wa-sqlite with OPFS backend) and Service Workers, enabling full app functionality without connectivity and automatic background sync when reconnected.
- Built voice recording with live waveform visualization, in-app photo capture with Azure Blob Storage integration, QR/barcode scanning, GPS-based time tracking, and a drag-and-drop customizable dashboard — all offline-capable with local SQLite storage and a priority-ordered sync queue.

Lions Den Cinemas | [CMPS383-2025-SP-P03-G06](#)

January 2025 – May 2025

- Developed a full-stack end-to-end cinema reservation system on a 5-person team using C#, .NET Core, Azure SQL, React, and Expo, delivering both a responsive web platform and an Android mobile app.
- Applied Agile methodologies with 2-week sprints, built secure REST APIs, and collaborated on UI/UX, database design, and version control to ensure smooth and user-friendly software delivery.

Personal Portfolio Website | taylorfradella.com

April 2025 – Present

- Designed and developed a responsive portfolio site with React 18, Vite, and Material UI, featuring a custom glassmorphism theme with a dark, sleek color palette.
- Built a physics-driven 3D lanyard animation using Three.js, React Three Fiber, and Rapier with drag interaction, load-in swing animation, and mobile-specific positioning adjustments.
- Optimized performance with lazy loading, viewport-aware rendering, and Framer Motion animations with reduced-motion accessibility support, built on a custom liquid glass UI surface system with graceful fallbacks.

Workly | [Workly-App](#)

August 2025 – December 2025

- Built a cross-platform job search app with Flutter and Firebase, featuring a swipe-based browsing interface, real-time data sync via Cloud Firestore, and secure authentication.
- Integrated AI-powered job matching that scores listings against user qualifications and preferences, plus an AI cover letter generator that produces tailored applications per posting.
- Managed state with Provider for reactive UI updates across iOS, Android, and web, with smooth swipe animations and comprehensive user profile and application tracking.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Dart, HTML/CSS, Java, C#, SQL

Frameworks: React, Next.js, React Native (Expo), Flutter, Node.js, Tailwind CSS, shadcn/ui, TanStack Query, Zustand, React Hook Form, Zod

Tools & Platforms: Docker, Azure (Blob Storage, Queue Storage, OpenAI/Whisper), GitHub Actions, PostgreSQL, SQLite/WebAssembly (wa-sqlite), OPFS, Service Workers

Testing: Vitest, React Testing Library

EXPERIENCE

Laitram Machinery, Harahan, LA — *AI Strategy & Implementation Intern*

May 2026 – Present

- Audit internal workflows to identify high-impact opportunities for AI integration.
- Train non-technical staff on practical AI tools to streamline daily work.
- Partner with department leads to scope and prototype AI-driven solutions.

Texas Roadhouse, Covington, LA — *Server*

June 2017 – August 2021

- Managed multiple tables simultaneously during peak hours, developing strong prioritization, communication, and problem-solving skills under pressure.
